

## SOLANACEAE

**Barker RM (2010) Australian Solanaceae species: identification and information. Version 1.**  
State Herbarium of South Australia

**ELECTRONIC RESOURCE, ON-LINE, INTERACTIVE:**

[http://www.flora.sa.gov.au/id\\_tool.shtml](http://www.flora.sa.gov.au/id_tool.shtml) (may require Java upgrade, see site for specifications).

A comprehensive interactive key and information system, running on the user-friendly Lucid platform. There are several components:

- Key to Australian Solanaceae species (whole family)
- Key to subgenera of *Solanum*
- Key to groups of subgenus *Leptostemonum* of *Solanum*
- Key to Australian *Solanum* species
- Key to Australian *Nicotiana* species

All are linked to a common set of species fact sheets with descriptions, notes, copious images, nomenclatural details, conservation and declared/noxious status (these dating), notes on alkaloids, ethnobotany and economic aspects of the family, and references. RECOMMENDED

**George AS (exec. ed.) (1982) Flora of Australia. Volume 29. Solanaceae.** Australian Government Publishing Service, Canberra. 208 pp. ISBN 0642070148.

A then-comprehensive treatment of the family in Australia. Fully keyed, short descriptions and notes, small maps, and a few line drawings and colour photos. Now largely superseded by Barker (2010).

**Symon DE (1994) Kangaroo apples – *Solanum* sect. *Archaesolanum*.** DE Symon, State Herbarium of SA, North Terrace, SA. 56 pp. ISBN 0646199056.

Descriptions, good colour paintings, and electron micrographs of the eight species of *Solanum* known as Kangaroo Apples.
